- L'augmentation des taux hypothécaires devrait peser sur la demande pour du logement en propriété - Depuis le 2^{ème} trimestre 2022, l'arbitrage économique est défavorable à la propriété

- À plus long terme, l'offre devrait s'apprecier, alimentée par une production de logements davantage orientée sur le segment de la propriété

+ Dans un contexte inflationniste et une consolidation des prix des logements en propriété, la capacité d'acquisition des ménages se renforce

+ Après une période de détente du marché résidentiel vaudois, de nouvelles tensions apparaissent. Le recul de la production devrait accentuer la pénurie et soutenir les prix
